

Angelus Britannicus:

A N

E P H E M E R I S

For the Year of our Re-
demption 1669.

Being the First after the Bissextile or Leap-year.
And from the Creation of the World 5618.

Amplified with

Astronomical Observations from the Suns

Ingress Into *trics*, and the other Cardinal
Points; with an account of the Eclip-
ses, Conjunctions, and other
Configurations of the
Heavenly Bodies.

Calculated for the Meridian of *LONDON*, where
the Pole Artick is elevated above the Horizon 51
Degrees, and 32 Minutes, but may indifferently
serve for *ENGLAND, SCOTLAND,*
and *IRELAND.*

By John Tanner, Student in Astrology and Physick.

Agunt non Cogunt:

*Astra in Voluntatem hominis, & liberum arbitrium
indirectè, & per accidens agunt; dum directè tem-
peramentum significant & disponunt, sensusque in
consensum trahunt.*

LONDON,

Printed by Thomas Ratcliffe and Thomas Daniel for
the Company of Stationers. 1669

Common Notes for the YEAR 1669.

According to the
 Julian, English, Old } Gregorian, Foreign, or
 Account. } New Account.

January hath xxxi dayes.

Month days. Week days.

Return my wandering Genius, and dry
Thy liquid plumes; begg favour from on high;
Court fair Urania, visit her heavenly Court,
Let Trident Neptune and his Sons take Sport
On th' Brinie main, o're curled billows flye,
Whilſt thou once more doſt view the ſpangled Skye.

January 1649.

Month days. The well-disposed Planets all combines,
To beautifie with Sextiles and with Trines
Each others Sphears : with Courtship they begin,
And friendly rays, to let the New-year in.
Before the Month ends Sol and Saturn meet,
Hence follows dark cold aire with Snow or Sleet.

London Weather Observations, 1649.

February 1669.

Month days.

Stillben in hast to Chronos now applies,
As if he had design'd some windes to raise:
windes may bring clouds which will make dark the skye,
Yet Hermes Squaring Ioue will purifie.
But Saturn with bright Venus joyn'd brings rain,
Yet guffs of winde soon clears the air again.

March 1669.

Month
dayes.

Cold Winter Quarter's gone, sweet Spring grows near,
Rough Mars on Venus smiles, sure 'twill be clear &
And though bright Jove doth Square the Queen of love,
A Season temperate (I think) 'twill prove.
But Sol and Hermes meeting bath design'd
A droughty Aine, and an unwholesome winde.

June hath xxx days.

Just as bright Sol doth cut the tropick line,
He finds the two superiour Stars in trine,
Who promise all things good, but who can tell,
(Since Jove is weak) if things will succeed well?
For Sol conjoin'd with Jove not long before,
Will rather search (I fear) than heal the sore.

June 1669.

Month Days.

Observe the Heavens, see how this month begins,
Five of the seven traverse the heaven's Twin;
Saturn doth treat them from a friendly Sign,
But they're oppos'd by fair Proserpine.

The weather mostly inclin'd to be fair,
But sometimes thunder-clouds doth dark the air.

September 1669.

Month Days.

Hermes on Phaeton smiles, its likely he
Some gales of wholesome winds will cause to be,
Some pleasing showers too for the season kind,
Jove squares with Venus bright, whose friendly mind,
And Saturns loving trine, promise to bring
A seed time fitted to sow every thing.

October 1669.

Month Days.

Just as the Month doth end Saturn doth dare
The greater light of Heaven with's hateful square :
It darks the air, close consults signifies,
Fills great mens minds with fears and jealousies.
Some yield unto the Grave, some lose their places,
Some suffer imprisonment, and some disgraces.

November hath xxx days.

Now Phaethon that kind and friendly Star,
Is much maligned by the God of War:
Mischief design'd Religion sometimes hide,
And fair presences look well till they're try'd.
The fifth day of November's not forgot, (Plot,
When Heaven discover'd that bellicose Powder.

		Now Phaethon that kind and friendly Star, Is much malign'd by the God of War: Mischief assign'd Religion sometimes hide, And fair pretences look well till they're try'd. The fifth day of November's not forgot, (Plot, When Heaven discover'd that bellifib Powder.

November 1669.

Month Days.

This Month beginneth as the other ended,
By no assistant ray we are befriended,
But are and shall be yet subject unto
The evils that grim Saturn list to do.

Yet afterwards the Stars so placed are,
Which makes the weather warmer and more fair.

December hath xxxi. days.

If you the heavenly Sphers survey, you'll see
The sun and Jove in perfect enmity:
The effects of which, as ancient Authors say,
That Mercy and Justice too shall fall away.
In this our iron age there is but few,
But will acknowledge the Aphorism true.

December 1669.

Month Days.

To temperature this Month seems to be inclin'd,
The Stars in their configurations kind.
Saturn and Venus would send rain or snow,
And Hermes too; but Sol and Jove saith no.
But leaving Saturn they consult together,
To end the year with snow or slabby weather.

Lunations and other observations Aspects & weather.

1	Day 7 hours 40 min.	
2		* ☉ ♀ 6 m. Cloudy
3	The head of Antinom riseth Cosm.	♂ Apog. and cold.
4	5 Brights fow of ♀ sets Cosm.	
5	Last quarter 2 min. past 1 aftern.	More pleasant.
6	Canis minoris Cosmicus Occasus.	♀ in Max. Elonga

Astrological Observations

For the Year 1669.

MY dull and drowzie Genius awake,
Rouze up thy self, and prudent courage take,
Thy heavy Anchor weigh, and loose the Sails,
Forake thy harbour, pray for Prosperous gales:
But if the wind prove cross, the weather rage,
If with rough waters thou 'rt forc'd to engage;
If hollow winds come whistling from th'high clouds,
Secure thy top masts, main masts, yards, and shrouds.
If Seas thou ship from the ambitious main,
Like a good Seaman pump them out again.
With care observe the dangers on each hand,
The wracking rocks, and quick devouring sand.
Being arriv'd for product boldly sue,
Thy Bills of Lading offer unto view;
T'affirm thy *Cargo* good thou maist be bold,
No goods prohibited being in thy Hold:
Moreover tell them that thy chiefeest ends,
Are to accommodate thy honest friends;
Unto whom every year by me thou'rt sent,
To every one of them my love present.

I Shall here (as formerly, it hath been my practise) by
way of example explaine th use of so many Tables in
the Almanack as need any explanation, and first I shall
begin with the Tide Table. If you would know the time
of high water at London bridge, or elsewhere, on the first of
February this year, first find the age of the moon by ac-
counting how many dayes are past since she last changed :
you find that the moon changed upon the 21 of January at
night, so that the Moon on the first of February, is 11 dayes
old: then you must have recourse to the two Tables imme-
diately before the *Ephemeris* or Almanack. In the first you
find London, and the figure of 5 answering thereto, which
is

Astrological Observations

the number of the point of the compass. Then look for 5 in the other Table (which shews the hours and minutes of highwater) among the great figures on the head of the Table, and 11 which is the moons age, in the first column so intituled the moons age, and in the common angle or meeting place, you will find 11 hours 48 minutes, which is the time of high water at London bridge. The same day at Bristol, whose point of the compass is 10, it is full Sea at 3 hours 33 minutes. At Queenborough, Southampton, Portsmouth, and the Isle of Wight, which are under the first point of the compass, it is full Sea at 48 minutes past 8 of the clock. At Newcastle, Humber, Falmouth, Dartmouth, the Lizard, whose points of the compass is 8 it is high water, or full Sea, at 3 minutes past 9. The like you may do at any time, or for any place mentioned in the Table, as exactly, as any general rule can teach; but the latitude of the moon winds and land floods doe cause the Tides sometimes to vary from the time found in the Table.

The five Tables after the *Ephemeris* serve to erect a Celestiall Scheme or Figure of heaven (according to the Doctrine of *Regiomontanus*) thus, on the 21 of March this year there is a new moon at 6 hours, 24 minutes, which by the first able I convert into degrees of the Aequator, and they give 96 degrees, which is the right ascension of time. The Sun is then in 11 degrees, 30 minutes of γ . To find his right ascension, I enter the second Table with 12 degrees, being my nearest number in the first column, and in the second column under γ I have 11, which is the right ascension of the Sun, both which are to be added together thus, d.

The right ascension of time, 96.

The right ascension of the Sun 11

The right Ascension of the mid-heaven	add	107 the Cusp.	♄ 16.
		30	

The oblique ascension of the 11 house,	add	137 the Cusp.	♌ 23.
		30	

The oblique ascension of the 12 house,	add	167 the Cusp.	♊ 20.
		30	

The

For the year 1669.

The oblique ascension of the 197 the Cusp \approx 12.
ascendant. add 30

The oblique Ascension of 227 the Cusp. m 40.
the 2 house add 30

The oblique ascension of 257 the Cusp. \angle 50.
the third house.

So have you the Cusps of the 6 Oriental houses, the same degrees of the opposite Signs are the Cusps of the opposite houses, being the occidental part, as here you have the 16 degrees of \odot upon the mid-heaven or 10 house you must have 16 degrees of Capricorn upon the 4 house, and so of the rest; the opposite signes to each other are known thus

γ	δ	Π	\odot	\odot	m
Aries,	Taurus,	Gemini,	Cancer,	Leo,	Virgo
\approx	m	\angle	v	\approx	\times
Libra,	Scorpio,	Sagittarius,	Capricornus,	Aquarius,	Pisces.

The houses are opposite thus.

10, 11, 12, 1, 2, 3,
4, 5, 6, 7, 8, 9.

Then find the places of the planets at that hour in the Ephemeris, and place them in the figure in their respective places, as I have formerly sufficiently taught.

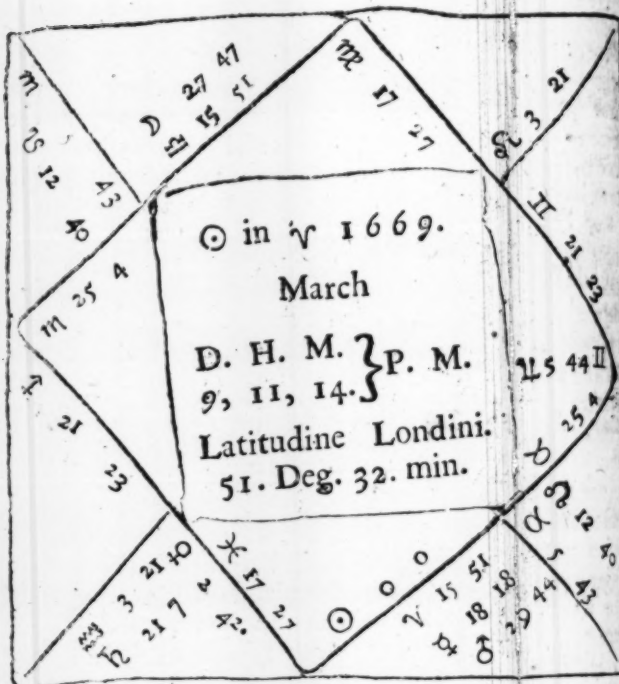

Of the Spring Quarter.

THE Spring commenceth or taketh its beginning at that timewhen the Sun toucheth the first Scruple of the Vernal Equinoctial sign *Aries*, making the dayes and nights of equal length all over the inhabited world, which happeneth this year on the 9th day of *March* 14 minutes past 11 at night, being *Tuesday*, as you may see by the

Figure

Astrological Observations

following, also how the Heavens are posited,
the Erraticks or Planets located in the Figure.

If you view the strength and dominion of the Planets
in the Helegiacall places of the three Figures, viz. the
Figure of the ingress it selfe, the full moon preventional,
and the new moon postvential, you will finde *Mercury*
and *Mars* excelling the rest in fortitudes, and challenging
the principal dominion of this Quarter, and indeed of the
whole year, because a fixed Sign ascends upon our Horizon
according to the opinion of Guido Bonatus part 4 chap. 24
quando in introitu Solis in Arietem fuerit ascendens signum fixum
contin

For the year 1669.

continet enim illa revolution se omnes quartas illius anni, & se qui fuerit tunc Dominus anni, erit Dominus totius anni, & totius revolutionis illius, &c. When at the Vernal ingress a fixed sign shall ascend, that revolution doth contain in it self all the four quarters or revolutions of that year: So that that Planet that is Lord of that Figure, shall be Lord of the whole year, and the whole revolution. *Haly* is of the same opinion, yet I think it convenient alwayes to take some regard to the face of Heaven at the Suns entrance into the other *Æquinoctial* and *Solstitial* points, according to the opinion of *Ptolomy* and other learned Authors.

Five of the seven Planets are *subterranean*, and all in amicable rayes to each other, which sheweth the present calmness in the most parts of the world, and that private debates and close consultations are on foot, and for the most part inclinations to peace, and endeavouring a right understanding between most of the *European* States and Princes; rather then any warlike actions, or eminent publick transactions upon the stage of the world. Upon the fourth of *November* last there happend a Trine Aspect of the two Superiors *Saturn* and *Jupiter*, whose influences are now in force, and may probably manifest themselves about this time. For in the Figure of the Vernal ingress, we have *Jupiter* angular above the earth, and the Sun in *Imo Celi*, or North angle, hastening to a Sextile aspect of him, whose effects may now or soon after probably manifest to the world some treaty or conclusion of peace or amicable League between severall of the *European* grandees; which will afford the world considerable discourse this year. Upon the 11 of *June* this present year 1669, the two Superiors come to their third Trine, which naturally signifieth Embassies for treaties, treaties for peace, amicable leagues, and peace concluded between severall Princes and States; Rich and spacious pretences on all hands; but (I fear) all is not Gold that glisters; For *Jupiter* is weak, in his detriment, combat of the Sun, and in opposition to the Suns place at the great conjunction in the year 1603. *Saturn* is very strong and essentially

Astrological Observations

essentially dignified, intimating that a subtle, deluding Spirit will be too too prevalent and powerfull to abuse the simple hearted & generous Joviallists, viz. the prudent, conscientious and well-meaning Magistrate, the learned and pious clergy men, or men eminent in the profession of Religion. On the 25 of *October* last there happened a visible Solar Eclipse in the second decanat of the *Scorpion*, a little after noon, whose effects will visibly appear, about the beginning of this year. For *Mars*, who was principal Lord and Ruler of the Eclipse, and was upon the horoscope at that time in his exaltation; Now upon the 27th of *March* transites the opposite degree of that Eclipse, thereby manifesting and helping forward its effects, which generally are motions (or rather, I suppose, rumours) of War, the death and destruction of the common and ignoble sort of people: destruction to Fowles, Fishes, and such creatures as live in or near the Sea. It signifieth the death of some eminent person in the world, whose mind is averse to War, saith *Proclus*. The Kingdoms and Cities principally concerned in the effects of this Eclipse you had in the last years Observations.

God preserve the City of *London* this year from some Pestilential distemper, which God in his mercy avert.

There are many notable aspects and configurations, which signifie many eminent and in auspicious effects, if the two Trines of the Superior bodies do not intercept their malévolent portents, &c.

The configurations of the heavenly bodies promise a seasonable Spring, serene & pleasant weather, which especially is signified by the Salubrious Sextil of the Sun and *Jupiter* from *Angles*. The Quartil of *Saturn* and *Mars*, on the 1st of *April*, doth portend Wind, Rain, Thunder, and a distemper'd face of Heaven. At the beginning of *May* the Quadrate of *Sol* and *Saturn* bring coole winds and Rain. *May* the 21 A conjunction of *Jupiter* and *Mars* bring thunder, lightning, and fiery coruscations.

For the year 1669.

Of the Summer Quarter.

The Summer Quarter beginneth with the Suns entrance into the Tropick of Cancer, which maketh the longest day and shortest night to all that inhabit on the North side of the Æquator, which happeneth this year on Friday the 11 of June at 1 minute past 2 in the morning; at which time there ascendes on the Eastern Horizon, the beginning or first 8 minutes of the Twins, and 28 degrees of the Celestiall Goat occupieth the Cusp of the Medium Cali. In the three Figures, viz. of the ingress, full moon preventional, and new moon postventional, Jupiter having 25 testimonies of fortitude, and Mercury 17, they are Rulers of this Quarter. In the Figure of the ingress, Jupiter is in his detriment in the house of Mercury, applying to a Trine of Saturn located in the 11 house Retrograde, (whose effects I have in the foregoing ingress mentioned) also at the same time the moon is in the 11th house in square to Mars combust in the second, and next applying to a square with Mercury. At the preventional full moon 11 degrees 57 minutes of II riseth and 7 degrees of ♒ Aquary mediats the Heaven: the moon in the seventh house in opposition to Jupiter on the Horoscope. Soon after Jupiter and Sol come to conjunction in the Ascendant: At the postventional change, 12 degrees 35 minutes of Sagitary on the eastern angle, and 13 degrees 21 minutes of the ballance on the mid-heaven. The same day in the morning the moon was in Δ to ♄ and ♀ with ♄; the next day she is in ♄ with Mars and Venus, which betokeneth showers and a moist air, which the conjunctions of ☉ and ♀ Mars and ♀ and ☉ and ♂ do also signify. The configurations of the planets and their radiations in the tropical ingress, presage, serene, seasonable and wholesome weather for most of the Quarter, sometimes wholesome showers, and thunder storms, which the particular judgement of the weather will more plainly make appear.

Of

Astrological Observations

Of the Harvest Quarter.

THe *Autumnal* or Harvest Quarter beginneth when the Sun entereth the Equinoctial sign *Libra*, or the Ballance, making the days and nights of equall length all the world over, the Poles excepted; which happeneth this year on the 12th of *September* being Sunday at 10 minutes past 5 at night; at which time 1 degree 8 minutes of the *Ecliptic* ascendeth our Eastern Finitor, and 18 degrees 30 minutes of *Sagittarius* mediateth the Heavens. The fortitudes and debilities that each planet hath in the principal places of the three Figures being duly considered, we must attribute the Dominion of this Quarter to ♀, *Venus* having 27 testimonies of fortitude, and *Mercury* 26. In the Figure of the ingress *Venus* is in the Western angle strong in her own house: *Mercury* in the same angle, and the Moon therein going to a conjunction with *Mars*. At the full moon preventional 23 degrees of ♈ ascends the Eastern Horizon and 9 degrees of the Bull on the medium *Celi*, the moon lately separated from a Δ of ♋. At the succeeding Luration or new moon, 26 degrees of the Virgin riseth, and 25 of the Twins Culminate. The Sun lately in conjunction with *Mercury*.

The weather for the most part of this Quarter proveth seasonable and kind, with pleasant and wholsome gales of Wind, not so subject to boisterous storms, and much wet, as formerly.

Of the Winter Quarter.

Winter Quarter begins when the Sun enters the Tropick of *Carpicorn*, making the shortest day and longest night to us that live on the North side the Equator, which happeneth this year December the 11, 57 minutes past 4

For the Year 1669.

past 4 in the morning, 22 degrees of the *Scorpion* upon the Horizon, and 13 degrees of the *Virgin* upon the mid-heaven. At the full moon preceding the ingress, the very beginning of π ascends, and the 18 of \uparrow culminats. At the succeeding change 19 degrees of the *Ballance* occupieth the horoscope, and 25 of the *Crab* the mid-heaven. By the collection of the fortitudes and debilities that the Planets have in these places of Heaven, Saturn challengeth priority having 19 testimonies of fortitude, and *Mars* having 18 may claim copartner-ship. The Sun lately separated from a Sextile of \uparrow and now in Sextile with \uparrow , which duly considered together with the other rayes of the Celestial bodies emitted towards each other, we may expect a salubrious air, some seasonable frosts, but little hard or extream weather, but rather tending to a diminution of cold and winter weather.

Of the Eclipses of this Year, 1669.

There will be two, and only two *Solar* Eclipses visible to the inhabitants of this earthly Globe. The first happeneth on *Tuesday* the 20th of April at 24 minutes past 5 in the morning, a great and terrible Eclipse not visible to us, but to those people that inhabit the East Indies near the Equinoctial Circle. The other is upon the 14 of *October* being *Thursday*, at 24 minutes past 9 at night, not seen by us neither, but to those that inhabit beyond the Equinoctial; yet may their effects, especially of the first, manifest themselves in *Europe*, more especially to those places under *Taurus*, as *Russia*, *Polonia* the greater, *Ireland*, *Lorrain*, and many other places, which for brevity sake I omit. It sometimes presageth, an *Earthquake*, and is oftentimes a prodromus of prejudice, to, and scarcity of graine, and fruits, herbs, and all the earth produces, it signifieth also many dammages and discommodities to Travellers, many abortions and prejudice to women in child bearing, the production of Monsters and unnatural births.

Both

Astrological Observations

Both these Solar Eclipses being Central, falling exactly on the Nodes, the first before the Sun comes to his *Apogee* and the other when it is past, there can be no Lunar Eclipse of the moon this year.

Certain necessary Rules for the Administration of publick letting of blood, &c.

THe Powers of the body of man are threefold, viz. Natural, Vital, and Animal. The Natural power is seated in the Liver, and is governed by *Jupiter*, assisted by *Luna* and *Venus*. From this is bred the four humours, viz. Blood, Choller, Phlegm, Melancholly. Blood is made of meat perfectly concocted, in quality hot, and moist, and is under *Jupiter*. Choller is made of meat more than perfectly concocted, it is the spume or froath of the blood, hot and dry under *Mars*. Phlegme is made of meat not perfectly digested, it is cold and moist in quality, under the moon and *Venus*; Melancholly is the sediment of the blood, cold and dry in quality, govern'd by *Saturn*.

The Natural Powers comprehend these four administering vertues or faculties, viz. attractive, retentive, digestive and expulsive. The Attractive faculty is hot and dry, under the influence of the Sun and *Mars*, fortified when the moon passeth through *Aries*, *Leo*, *Sagittarius*. The retentive faculty is cold and dry under *Saturn*, and is strengthened, the moon in *Taurus*, *Virgo*, & *Capricornus*. The digestive is hot and moist under *Jupiter*, strengthened the moon in *Gemini*, *Libra*, *Aquarius*. The expulsive is cold and moist under the moon, assisted by the moon in *Cancer*, *Scorpio*, *Pisces*. In strengthening these faculties, let the moon be in one of these signs, or let one of them ascend.

The Vitall power is seated in the heart, and is governed by the Sun; it is strengthened by its medicines best, and is best done when the Sun is in aspect with the Fortunes, viz. *Jupiter* and *Venus*.

For the Year 1669.

The Animal faculty hath its residence in the brain, and divided into intellectuive and sensitive, the first is under the influence of *Mercury*, the other of the Moon, and are both assisted by the benevolent rayes of *Jupiter*, and *Venus*.

The moon in *Cancer*, } ♀ } purge melancholly.
Scorpio, or *Pisces* in } ♀ } purge Choller.
Sextile, or *Trine* to } ☉♂ } purge phlegme.

To prepare the humours let the Moon be in *Gemini*, *Libra*, *Aquarius*.

Take Clusters the moon in *Aries*, *Libra*, *Scorpio*.

Take Vomits, the moon in *Aries*, *Taurus*, *Capricornus*.

Take Gargarismes, the moon in *Aries*, *Cancer*.

Purge the head by Sneezing, the moon in *Cancer*, *Leo*, *Virgo*.

Stop Rhumes, the moon in *Aries*, *Taurus*, *Capricornus*.

For Bathing, let the moon be in Signes contrary to the nature of the disease; Sweat two or three days after the change, or about the full moon, and let the moon be in *Aries*, *Leo*, or *Sagittarius*.

The season for bleeding is at Spring or Fall.

Let young people bleed from the Change to the first quarter.

Bleed the middle-ag'd from the first quarter to the Full.

Elder age bleed from the full to the last quarter.

Old age bleed from the last quarter to the change.

Bleed the { Sanguine } the moon in { ☿ or ♄ }
 { Cholerick } { ☊ or ♀ }
 { Phlegmatick } { ♀ or ☊ }
 { Melancholly } { ♄ or ☿ }

It is better if the moon be in conjunction, *Sextile* or *Trine* with the Fortunes, or the Planets in the like aspect one with the other. The moon in ill aspect with the infortunes, or the infortunes so configured forbid Phlebotomy.

Le

Astrological Observations. 1669.

Let not the moon be in *Gemini* or *Leo*. Observe the rules, unless in the *Plurisie*, *Phrensie*, *Squimancy*, *Apoplexy*, &c. where *Phlebotomy* ought not to be delay'd.

Farewell my Book, expose thy self to view;
And with humility thy Passport sue,
Which got, immediately unto the Press,
Intreat the Printer not t'abuse thy dress.
Thy Winters progress through the Nation take,
And let thy Friends of what thou hast partake.
Thy judgment modestly to them unfold
Touching the seasons, but be not too bold;
For all men erre, since *Adam* first transgress,
Why not the Astrologer among the rest?
If Faults thou find, whose ever the fault is,
Thy acceptance Reader mends all that's amis.

*From my house in Amerisham
in the County of Buckingham
this 5 of October 1668.*

F I N I S.

A short Narrative of the late dreadful Fire
in *London*, by Doctor *Edw. Waterhouse*.

Contemplatio Mortis & Immortalitatis,
A Contemplation of Death and Immortality.

Both to be sold by *R. Thrale*, at the Cross-
Keyes and Dolphin in *Aldersgate-street*.
